MicroShield™

Your Best Defense

With virulent strains of bacteria being reported nationwide, maintaining hygienic conditions in healthcare and educational settings is more critical than ever before.

MicroShield™ products are your first line of defense!

The MicroShield coating utilizes the Agion® antimicrobial compound, an inorganic material that incorporates the natural protective properties of silver, proven successful in controlling the spread and growth of a broad spectrum of types of mold, mildew and bacteria. For most types of microorganisms, the majority of contaminants will disappear in as little as 20 minutes.

Under normal wear, the MicroShield coating will last for the life of the hardware finish. A small scratch will not affect the protective ability of the product—the active silver “bridges” the gap. Long-lasting and non-toxic, MicroShield is available on most Corbin Russwin product lines.

Ideal for use in:

- hospitals/health clinics
- assisted living facilities
- laboratories
- offices
- schools
- daycare facilities

Registered with the EPA and the NSF, the Agion antimicrobial is even FDA-listed for use in medical and food preparation equipment.

The Agion antimicrobial is not intended as a substitute for good hygiene. Coated products must still be cleaned to insure the surfaces will be free of destructive microbes. ASSA ABLOY makes no representations or warranties, express or implied, as to the efficacy of the Agion antimicrobial. A copy of the Agion warranty is available upon request.

MicroShield™

As part of its promise to provide innovative solutions to their customers, ASSA ABLOY Group companies offer the MicroShield technology, a silver-based antimicrobial coating designed to stem the spread of germs and bacteria.
